

Founder Manifesto

1. Introduction

The Global Park project was created as an alternative.

Not to speculation, not to promotion, not to noise.

An alternative to the approach where technology serves the interests of the market rather than society.

Web3 technologies make it possible to preserve memory, ideas, and contribution.

Too often, however, they are used for short-term gain.

NFTs have become instruments of hype rather than meaning.

This contradicts the very nature of blockchain – a machine of trust, not of frenzy.

The initiative was implemented without external funding.

No expectation of return, profit, or ownership.

What has been created does not belong to anyone.

Nor should it.

All core components of the project are being transferred to a decentralized autonomous organization.

With no right of revocation, no mechanism of control.

The DAO will make decisions collectively.

This is not a resignation – it is the completion of a role and the beginning of the next phase.

Let the project become what the community chooses it to be.

Not a product. Not a brand. But an open space.

2. Author Identification

The creator of this project operates under the pseudonym THAL3MORUNX.

This is a private initiative, unconnected to any legal entity, company, or organization.

No personal data is disclosed.

No further identification is required, as the project is transferred to a decentralized community without any reciprocal obligations.

3. Project Description

The initiative known as Global Park consists of a set of digital and conceptual elements developed with the intent to explore the intersection of technology, nature, and collective memory.

The following components have been created and made operational:

- A unique idea and vision for a globally distributed park that exists both physically and digitally.
- A utility token deployed as a smart contract on the Ethereum blockchain under the name GPARK, with publicly verifiable code and fixed tokenomics.
- A domain and project website hosted at globalpark.io, serving as a public gateway to the initiative.

- An ENS identity registered as `globalpark.eth`, configured with associated metadata, including the token contract address, DAO references, and IPFS-linked documentation.
- Initial ecosystem content, including visual concepts, textual documentation, and governance infrastructure.

All development was executed to enable the project to operate independently, under the collective guidance of a decentralized autonomous organization.

4. Purpose of the Project

The project was not designed to generate revenue, attract investors, or serve commercial purposes.

Its foundation lies in the belief that advanced technologies should serve cultural, ecological, and social value – not speculation.

Global Park is intended as a space where the memory of people, places, and ideas can be preserved in a decentralized, tamper-resistant form.

It offers a new function for Web3 tools: not as vehicles of profit, but as instruments of preservation, contribution, and public access.

The initiative exists outside the market cycle.

Its value is not determined by trends, but by the extent to which it is adopted, expanded, and reinterpreted by the community.

The purpose is to provide infrastructure – not control.

To offer an idea – not ownership.

To invite participation – without obligation.

5. Personal Funding

The development and deployment of the project – including the smart contract, website, visual identity, and supporting materials – were financed exclusively by the individual acting under the pseudonym THAL3MORUNX.

No external funding, venture capital, or corporate resources were involved.

No tokens were sold, promised, or distributed in exchange for support.

The initiative was launched as an act of conviction.

The time, effort, and resources were contributed voluntarily, without expectation of financial return.

This fact establishes a clear line between the project's creation and any form of financial interest.

It was not built to be owned – only to be used.

6. Renunciation of Ownership

No intellectual property claims are asserted over the code, concept, name, domain, ENS, visual assets, or any part of the project known as Global Park.

There are no retained rights, copyrights, licenses, or reserved privileges.

No central authority, including the original creator, will maintain control or have exclusive access to any part of the ecosystem.

The smart contract is deployed without administrative backdoors.

The ENS is configured with references to public documents, and no proprietary claims are registered.

This initiative is hereby released to the public domain – not as a product, but as a shared starting point.

7. Transfer of Initiative to the DAO

The initiative is formally and unconditionally transferred to Global Park DAO, a decentralized autonomous organization operating on the Ethereum blockchain.

All further decisions regarding the use, governance, development, or interpretation of the project shall be made through mechanisms defined by the DAO –

including on-chain governance, multisignature treasury management, and community voting.

No rollback, override, or intervention from the original creator shall be possible or expected.

No hidden privileges or fallback roles remain.

The DAO becomes the sole steward of the project's future – structurally, operationally, and ideologically.

8. Description of the DAO

Global Park DAO is an open, decentralized collective.

It does not possess legal personality. It is not a corporation, foundation, or registered entity.

Its operations are executed through verifiable smart contracts on the Ethereum blockchain.

Initial governance is based on multisignature treasury control and token-based voting through platforms such as Snapshot.

The DAO has no owners.

Any individual holding the GPARK token, once unlocked, may participate in decisions, proposals, and community development.

Its structure is fluid, its membership permissionless, and its direction defined by consensus.

9. Terms of Transfer

The transfer of this initiative to Global Park DAO is conducted without any form

of compensation, obligation, or conditional agreement.

There is no expectation of reimbursement, recognition, or continued involvement.

The act of transfer is unilateral, complete, and final.

The DAO assumes no debt, liability, or contractual responsibility toward the original creator.

This is a contribution – not a transaction.

10. Conclusion

What was built is no longer under individual control. It is now open to interpretation, adaptation, and continuation by a wider collective.

This document exists not to define the future of the project, but to release its past.

From this point forward, Global Park belongs to no one – and to everyone.

May it evolve with care, integrity, and shared intent.
