

DECLARATION OF INTENT

GLOBAL PARK DAO

1. Introduction

This Declaration of Intent is published on behalf of the decentralized community operating as Global Park DAO.

It exists to clarify the purpose, principles, and operational stance of the DAO for external collaborators, partners, institutions, and individuals who may interact with the project – including developers, architects, civic entities, public spaces, and token holders.

2. Vision

Global Park DAO was born from the idea that the intersection of technology and nature can serve as a new medium of cultural preservation and environmental awareness.

In an era where attention is short and memory is fragile, the DAO aspires to create an ecosystem where contributions – digital and physical – can be recorded, curated, and celebrated through decentralized systems.

3. Mission Statement

Global Park DAO's mission is to support the creation of public environments – both online and offline – that merge natural presence, digital expression, and community ownership.

It aims to empower citizens, artists, developers, and local governments to participate in shared projects that leave lasting cultural, environmental, and educational value.

4. Scope of Activity

Global Park DAO operates across the following dimensions:

- Development and curation of digital heritage objects (NFTs, decentralized archives)
- Support for physical park installations and eco-art
- Funding of environmental and cultural initiatives via token-based governance
- Collaboration with landowners, developers, and civic organizations
- Creation of open digital platforms for participation and representation
- Documentation and preservation of contributions through on-chain tools

5. Governance Model

Global Park DAO operates on a phased governance system:

- During the Genesis Phase, proposals are advisory and execution is managed by a multisignature DAO Council.
- In the Autonomous Phase, decisions are made by token holders through binding Snapshot votes.

Participation is open to any individual holding the GPARK token.

Proposals, funding decisions, and structural changes follow transparent and community-led processes.

6. Public Good and Non-Profit Ethos

Global Park DAO is not a for-profit enterprise.

It does not distribute dividends, guarantee financial returns, or issue shares.

The DAO exists to coordinate value creation in the public interest – not to extract capital.

All activities are directed toward cultural development, collective expression, and the preservation of ecological and digital heritage.

7. Openness to Collaboration

The DAO welcomes partnerships with developers, institutions, municipalities, and private landowners.

Memorandums of understanding and joint ventures may be initiated in which the DAO community acts as an open and transparent co-creator – without requiring legal personhood or centralized control.

All parties are encouraged to propose ideas, submit locations, or build parallel projects aligned with the DAO's mission.

8. Value Creation vs Financial Expectation

Global Park DAO does not promise profit.

It does not issue securities, investment products, or yield-bearing instruments.

No statements from the DAO should be interpreted as financial advice or forecasts.

That said, the DAO recognizes that tokens – like any scarce digital asset – may acquire value over time due to participation, demand, or reputation.

This is a natural byproduct of openness and contribution – not its goal.

The DAO does not sell wealth.

It creates purpose.

And invites others to build upon it.

9. Legal and Jurisdictional Status

Global Park DAO is not incorporated as a legal entity.

It has no headquarters, board, or controlling shareholders.

However, it may engage in contractual relationships through partners, representatives, or service providers – including multisignature-controlled wallets or external legal wrappers.

All such relationships are to be formed transparently and documented on-chain or through published agreements.

10. Closing Statement

Global Park DAO is an open invitation to collaborate.

It is a living experiment in co-ownership, nature-aligned design, and decentralized memory.

To anyone who believes in long-term cultural value, open participation, and the power of shared space – welcome.
